

Make interactive projects

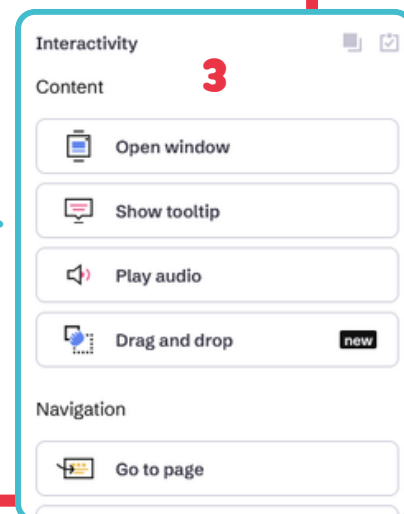

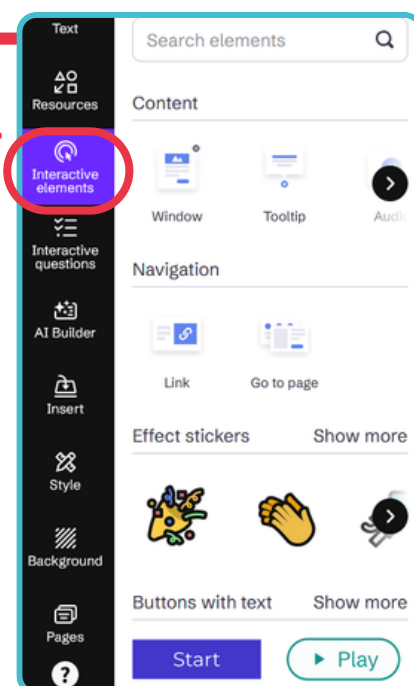

As well as creating eye-catching presentations, Genially lets you make them interactive — including by adding games!

Want to add interactive elements? Want to add quizzes to see what your participants have learned? Let's see how to do it!

Add interactive elements

Genially templates often include interactive elements, such as navigation and answer buttons. We've seen how to edit them - now let's add some new ones!

- 1 Click **Interactive elements** to explore the options:
 - **Content** - Add ready-made interactive content
 - **Navigation** - Add links to specific pages
 - **Effect stickers** - Add a little movement and sparkle
 - **Buttons** - Add clickable buttons, with or without text
 - **Interactive area** - Make any part of your work clickable and add an action, such as opening a window or showing information.
- 2 Click  **Interactivity** above the element to edit it
- 3 Choose an action in the right-hand panel and follow the instructions

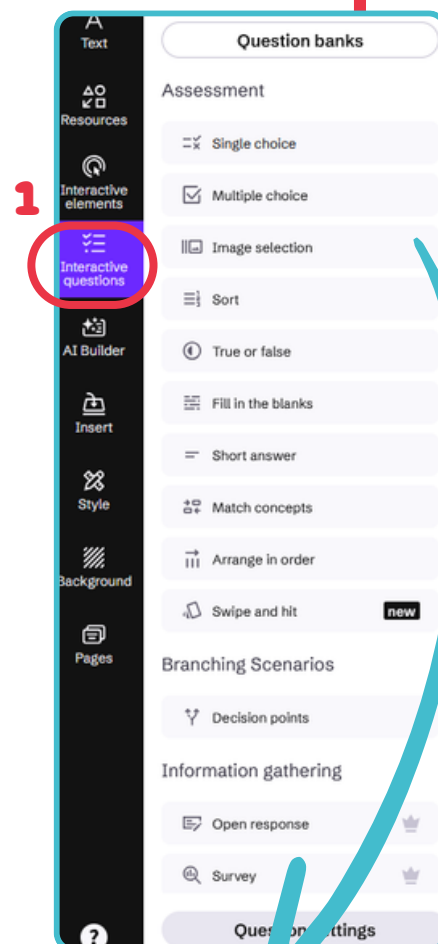

Genially - Game Templates (2/2)

Add interactive questions

Now, let's create some games!

- 1 Click **Interactive questions** to explore the different quiz types available: single or multiple choice, true/false, fill-in-the-blanks, matching... You're spoiled for choice!
- 2 Choose one, then use the right-hand panel to customise it:
 - **Content** - Edit the question and possible answers
 - **Actions** - Add behaviours, play audio, and more.
 - **Design** - Change the quiz layout and look

Globby's Games - Builder Kit

In addition to the Interactive questions available in Genially, a **Builder Kit** has been developed to help you create Globby's Games around discovering European languages and countries.

It includes **fully designed game examples** and **step-by-step how-to tutorials** to show you how to create them.

[Click here to access the Builder Kit](#)
— and let the games begin!
